

PROJECT CASE STUDY

# WERRIBEE IRRIGATION MODERNISATION

## Solution highlights

The first stage covered 2.9km of pipeline, from the corner of Duncans and Cliffords Rd, Werribee South. This area spans across the top of the main channel at Harrison’s Lane, through to the junction between Diggers Road and Aviation Road.

The project required the source, supply and delivery of 2.49 km of DN1000 FW GRP Pipe at PN10, SN 10,000 & fittings.

<b>Project</b>	Werribee Irrigation Modernisation
<b>Who</b>	Southern Rural Water
<b>Where</b>	Werribee Irrigation District, Victoria
<b>When</b>	2017
<b>Scope</b>	Source and supply of GRP Pipes & Fittings

This project is a major win for irrigators — not only giving them security around existing jobs, but certainty to boost farm production in the future.

Don Nardella, Member for Melton.

# Summary

---

Clover Pipelines worked with Southern Rural Water, the water authority of the region, to complete Stage 1 of the project in August 2017.

The upgrade aims to replace the current channel system, while providing better service to the customer outlets in the area. Replacing the open channel with pipeline infrastructure allows for greater and more consistent flow for irrigators, while providing better water security and management.

Over three stages, the project will replace 39km of open channel with pipelines, and once complete, has been projected to save up to five billion liters of water that is currently lost each year through evaporation. This will underpin 660 existing jobs, as well as help to create 18 new on-farm positions.
